

6.3

✓ I)

Olivier Berg

$$\frac{\forall x(P_x \rightarrow P_{i,x})}{\forall EI}$$

$$\frac{P_a \rightarrow P_{i,a} \quad [P_a]}{\frac{P_{i,a}}{\neg P_a \rightarrow P_{i,a}}} \rightarrow^{\text{Intro}} \neg P_a \rightarrow^{\neg \text{Intro}}$$

✓ II)

$$\frac{\forall x(P_x \rightarrow Q_x)}{\forall EM}$$

$$\frac{P_a \rightarrow Q_a \quad P_a}{Q_a} \rightarrow^{\text{Elr}}$$

$$\neg Q_a \rightarrow^{\neg \text{Intro}}$$

✓ III)

(Q2 & 3 intro) You are proving the  
2nd de-Morgan law here.

$$\neg(P \wedge Q) \stackrel{\text{def}}{\equiv} \neg P \vee \neg Q$$

However, this time it has infinite terms:

$$\neg(P \wedge Q \wedge \dots) \stackrel{\text{def}}{\equiv} \neg P \vee \neg Q \vee \neg \dots$$

The proof for the 2nd de-Morgan law is:

$$\frac{[\neg P]}{\neg P \vee \neg Q} \text{VI}$$

$$\neg P \vee \neg Q$$

$$\frac{[\neg(\neg P \vee \neg Q)]}{\neg P \wedge \neg Q} \text{IE}$$

$$\frac{\neg Q}{\neg P \vee \neg Q} \text{VF}$$

$$\frac{\neg P \vee \neg Q}{\neg(P \wedge Q)} \text{IE}$$

Q

$$\neg(P \wedge Q)$$

$$P \wedge Q$$

¬ E

The Proof for this exercise is  
exactly the same

$$\frac{\frac{[\neg Q_a]}{\exists x \neg Q_x} \neg I}{[\neg \exists x \neg Q_x]} \neg E$$
$$\frac{Q_a}{\forall x Q_x} \forall I$$
$$\frac{\forall x Q_x}{\exists x \neg Q_x} \neg \forall x Q_x \neg E$$

IV)

$$\frac{\frac{[\forall y P_{ya}]}{\neg P_{ba}} \forall E}{\neg \forall y P_{ya}} \neg E$$
$$\frac{\exists x \neg P_{xa}}{\exists x \neg \forall y P_{ya}} \exists \text{ Intro}$$
$$\frac{\exists x \neg \forall y P_{ya}}{\exists_2 \neg \forall y P_{yz}} \exists \text{ Elim}$$

Will discuss in class.

$$\begin{array}{c}
 \forall) \\
 \frac{\frac{\frac{\frac{\frac{\forall_2 \forall_x, P_{ab2x_1}}{\forall_x, P_{abc}x_1}}{\forall_2 \exists_x \forall_x, P_{xyz}x_1}}{\exists_x \exists_y \forall_x, P_{xyz}x_1}}{\forall_2 \exists_x \forall_x, \exists_y P_{xyz}x_1}}{\exists_x \exists_y \forall_x, P_{xyz}x_1} \exists E \\
 \text{This is valid because it occurs in undischarged assumptions} \\
 \text{Step is correct in the proof}
 \end{array}$$

thus makes sense, consider the following

$$\forall x \exists y P_{xy} \neq \exists y \forall x P_{xy}$$

this is not valid because you are saying:

~~that there is someone, such that everyone is better than everyone, therefore~~

~~Everyone there is ~~is~~ ~~not~~ ~~for~~ for~~

~~everyone, there is at least one person~~

~~who is better, therefore, one person~~

~~is better than everyone. This is~~

~~of course not valid.~~

However, if you go in the opposite direction:

$$\exists x \forall y P_{xy} \vdash \forall y \exists x P_{xy}$$

This is valid: there is one person who is better than everyone (including himself), therefore, for everyone, there is at least one person better.

You are going from more ~~inform~~ information to less information, ~~more~~ instead of from less information to more information.

Therefore this is valid.

~~b10~~

~~P~~ is a Philosopher  
~~G~~ has Studied Gödel

$\forall x (P_x \rightarrow G_x) \therefore \forall x \forall y (P_x \rightarrow G_x)$

$\forall x (P_x \rightarrow G_x) \rightarrow \forall x (P_x \rightarrow G_x)$

$\forall x P_x \rightarrow \forall x (P_x \rightarrow G_x)$

~~and~~

P. is a Philosopher

R: ~~Mr.~~ has Studied logic

G: knows Gödel

$$\forall x ((P_x \wedge R_x) \rightarrow G_x) \vdash \forall x (P_x \xrightarrow{m} R_x) \rightarrow$$

$$\sum_{x \in A} P_x(R_x)$$

$$\text{Pa} \rightarrow \text{Ra} \xrightarrow{\quad [Pa] \quad} E$$

$$\forall x ((P_x \wedge R_x) \rightarrow G_x)$$

---

V.E

$$\frac{[Ra]}{Ra} \approx 1$$

$$(Pa \wedge Ra) \rightarrow La$$

Pa  $\wedge$  Ra

6

→ 7

$P_a \rightarrow G_a$

— 44 —

$$\nabla \times (\rho_x \rightarrow b_x)$$

→ 1

$$V_x(P_x \rightarrow R_x) \rightarrow V_x(P_x \rightarrow G_x)$$

b. c)

First, let's do the following one

$$R \leftrightarrow \neg R \vdash P$$

to do this

$$\frac{R \leftrightarrow \neg R [R]}{\neg R [r]}$$

$$\frac{}{\neg R [r] \quad \neg I}$$

$\neg R$

$$\frac{R \leftrightarrow \neg R [\neg R]}{R}$$

$$\frac{}{R [\neg R]}$$

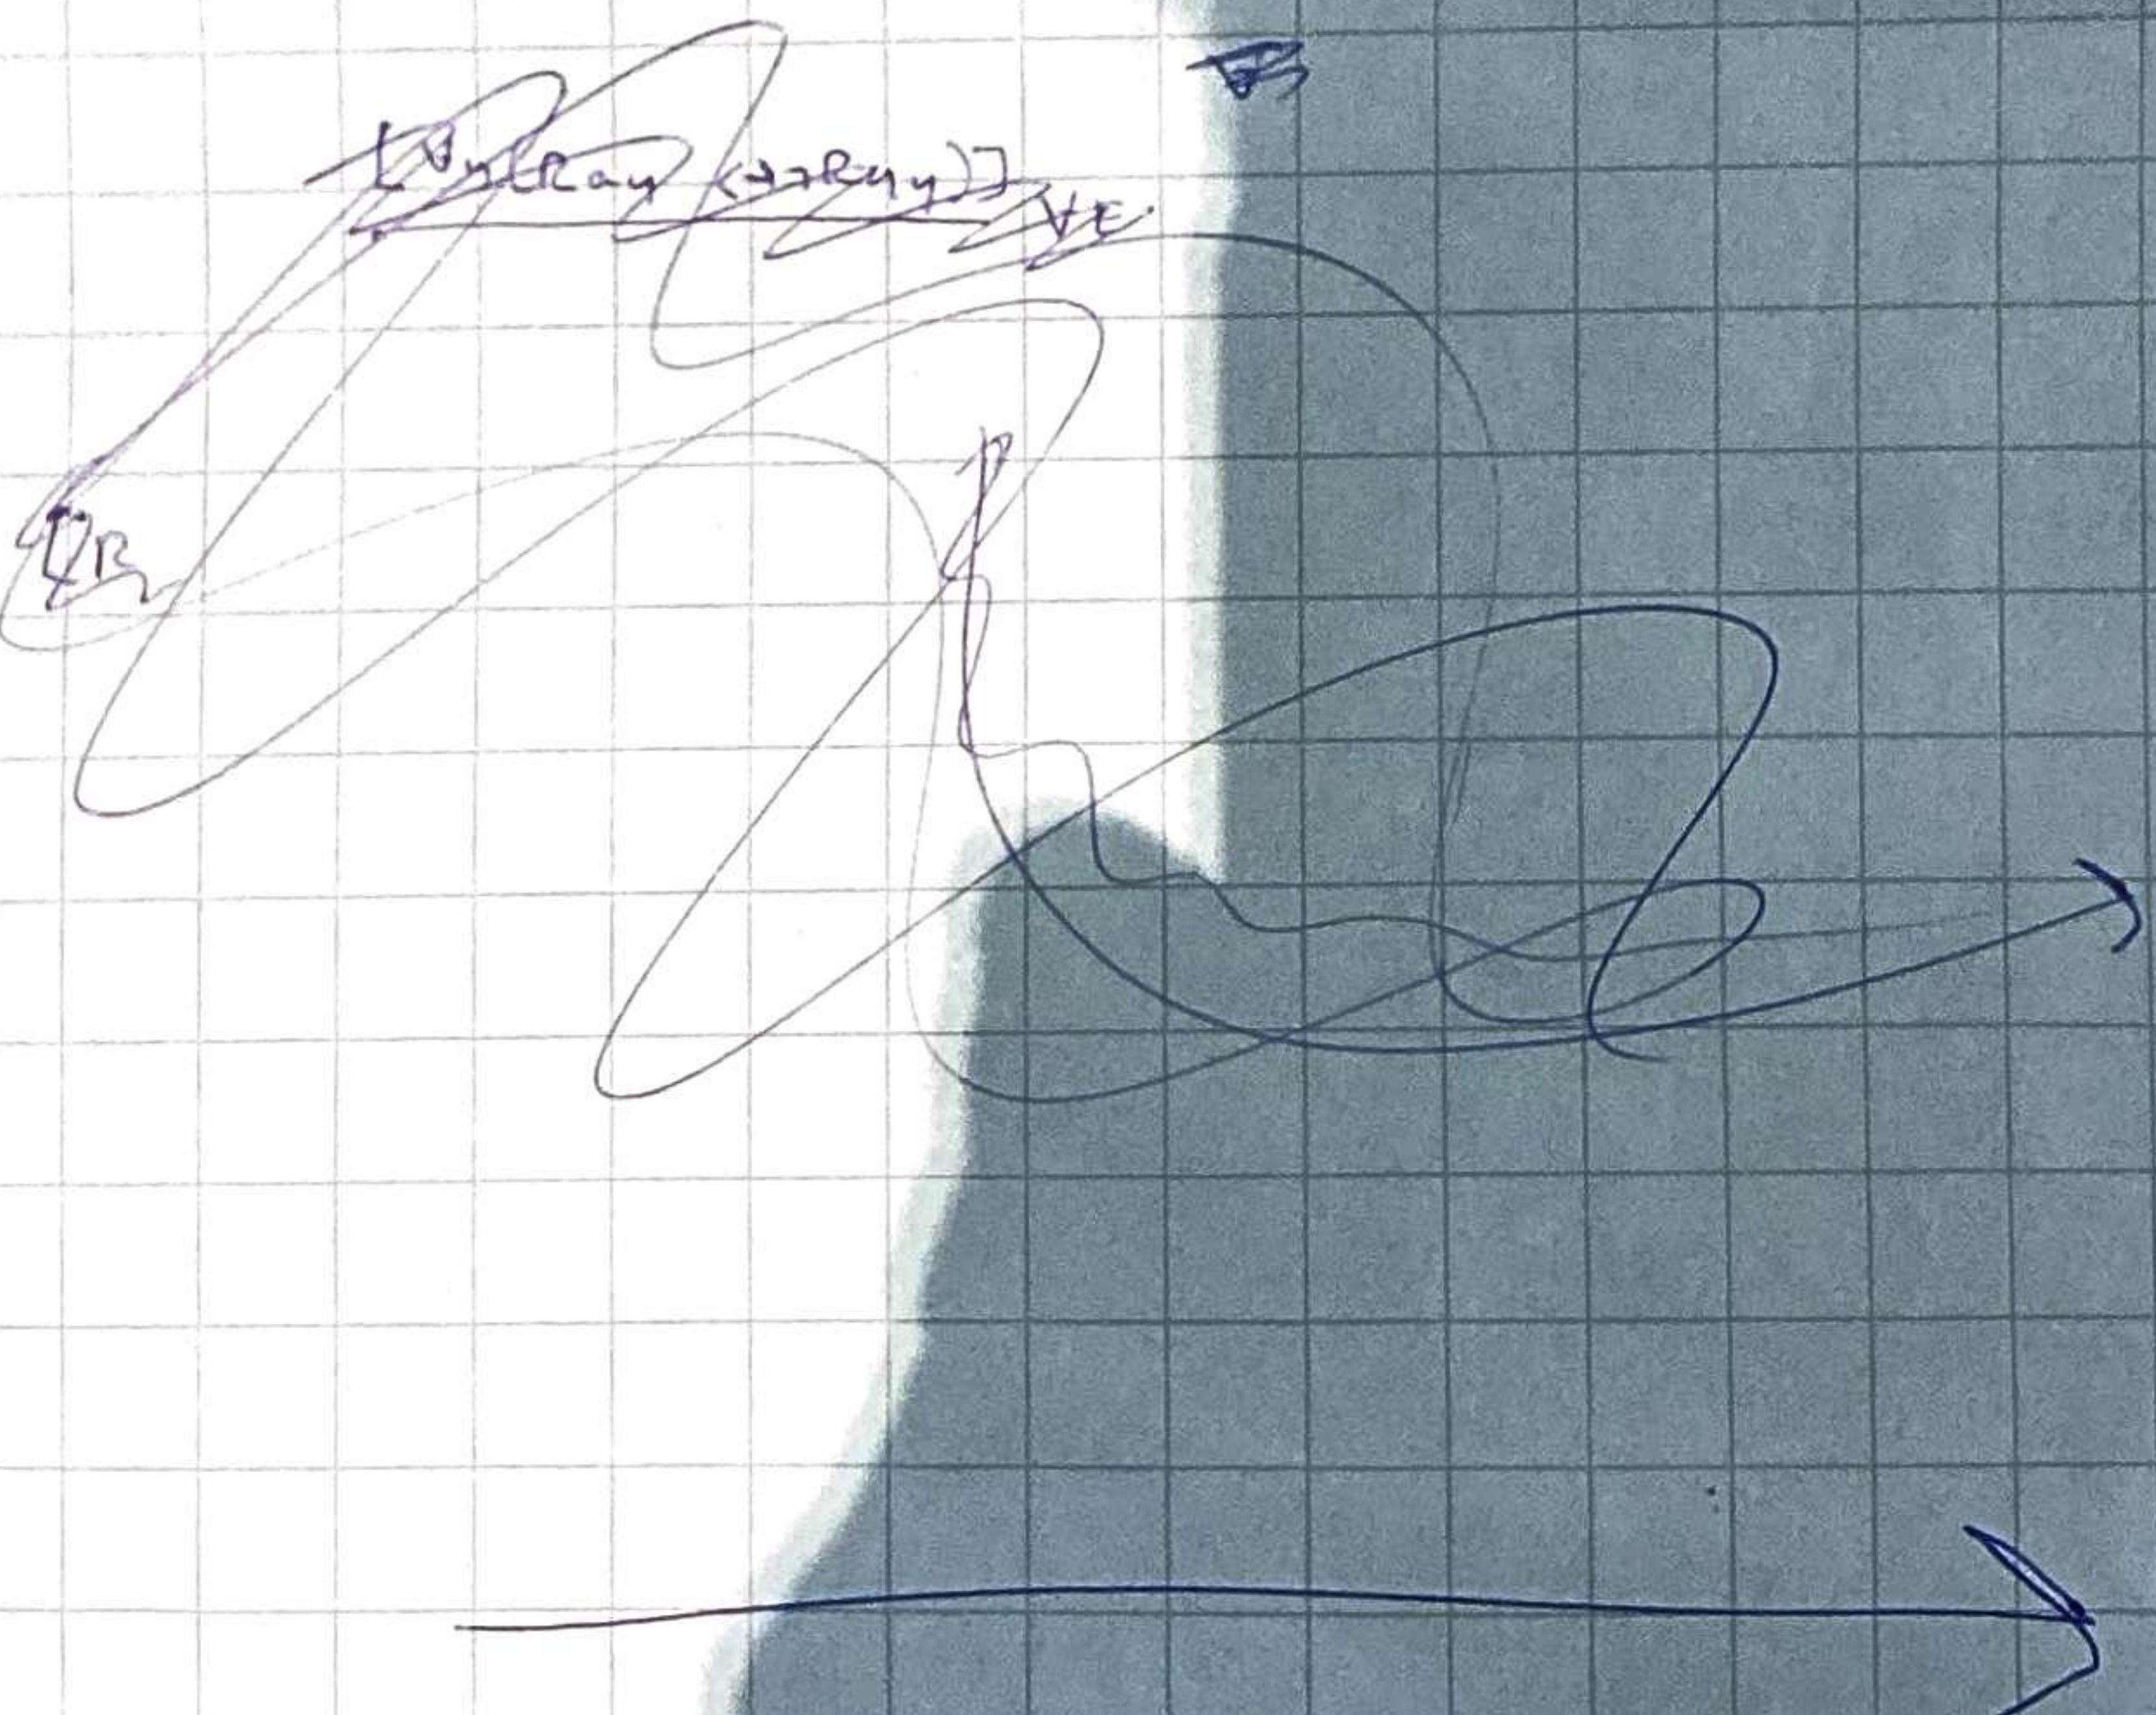

$R$

$\neg E$

$\neg E$

$P$

In the same way, one would do this one

Hyp Raas

$\forall \gamma (R_{\alpha\gamma} \leftrightarrow \neg R_{\gamma\alpha})$

$R_{\alpha\beta} \leftrightarrow \neg R_{\beta\alpha}$  [R<sub>αβ</sub>] $\leftrightarrow^E$

$\neg R_{\alpha\beta}$  [R<sub>αβ</sub>] $\leftrightarrow^E$

$\neg R_{\alpha\beta}$  [R<sub>αβ</sub>] $\leftrightarrow^E$

R<sub>αβ</sub>

$\neg E$

$\forall \gamma (R_{\alpha\gamma} \leftrightarrow \neg R_{\gamma\alpha})$

$R_{\alpha\beta} \leftrightarrow \neg R_{\beta\alpha}$  [R<sub>αβ</sub>] $\leftrightarrow^E$

R<sub>αβ</sub>

$\neg E$

$\forall \gamma (R_{\alpha\gamma} \leftrightarrow \neg R_{\gamma\alpha})$

R<sub>αβ</sub>

$\forall \gamma (R_{\alpha\gamma} \leftrightarrow \neg R_{\gamma\alpha})$

R<sub>αβ</sub>

$\neg E$

R<sub>αβ</sub>

$\forall \gamma (R_{\alpha\gamma} \leftrightarrow \neg R_{\gamma\alpha})$

R<sub>αβ</sub>  $\leftrightarrow \neg R_{\alpha\beta}$

R<sub>αβ</sub> [R<sub>αβ</sub>] $\leftrightarrow^E$

R<sub>αβ</sub> [R<sub>αβ</sub>] $\leftrightarrow^E$

R<sub>αβ</sub>

$\neg E$

7.1

I)

the problem is that when the proof goes from:

$\boxed{[P_a \wedge Q_a]}$

$$\frac{\exists x(P_x \wedge Q_x)}{P_a}$$

↓  
II

$\exists E^{1\text{m}}$

this is not allowed <sup>in the  $\exists$ -Elim rule</sup> because the arbitrary variable used in the application is used in the conclusion.

it should be

→ I am not sure if I could follow this,  
but it's about the incorrect application  
of  $\exists$  Elim (I think you are  
saying the same thing)

$$\frac{\exists x(P_x \wedge Q_x)}{P_a}$$

$\exists x P_x$

$$\frac{\exists x(P_x \wedge Q_x)}{Q_a}$$

$\exists x Q_x$

$$\checkmark \quad \exists x P_x \wedge \exists x Q_x$$

✓ II) As I pointed out in 6.3 v, this is not valid, let A be the structure with

$$D_A = \{1, 2\}$$

$$|R^2|_A = \{<1, 2>, <2, 1>\}$$

the problem in the proof is again in

3y Run

Ran

Craig

the arbitrary variable  
B occurs in the conclusion

✓ #) the Problem is in the Step

$$P_a \rightarrow Q_a$$

$$\forall x (P_x \rightarrow Q_x)$$

You cannot do this Because a occurs  
in undischarged assumptions.

It is also not valid. Let A be the  
 $L_2$ -structure with:

$$D_A = \{1, 2\}$$

$$|P|_A = \{1, 2\}.$$

$$|Q'|_A = \{1\}$$
